

Saved passwords on android phone

Continue

The modern world has grown a second brain and keeps it in their pocket. We have so much of ourselves and our lives on our phones that the thought of losing it and starting a new phone empty can be alarming. It doesn't have to be, with just a couple clicks. According to DeviceAtlas, you get a new phone every 18 months to 2 years on average. We probably spend about 6 months of that just getting our phone back to where we like it with our apps, contacts, and settings. Two phone changes and you've just wasted a year on tuning your phone. Let's see how we can cut that down to minutes. The phone we're using today is a Samsung A5, but it's pretty much the same for any Android phone.

Google's Phone Backup Make sure you're doing this over a WiFi connection. If not, it could use a lot of your cellular data and possibly a lot of money. You'll also need a Google account and a connection to your Google Drive. If you don't, go get a Google account now and then continue. Find and tap the Settings icon. Once in the Settings screen, find and tap Google - Google Settings. In Google Settings, tap on Backup. In the Backup screen, check to make sure that your Google account is connected. Now make sure the Back up to Google Drive button is in the on position. Finally, tap on the Back up now button. You'll see a progress bar near the top of the screen. There is no major notification that the backup is done. You'll be able to tell by the Back up now button no longer being grayed out and the last backup times will say 0 minutes ago. Restoring from Google Backup will usually only be necessary if your phone is wiped, or you get a new phone. Log in to your Google account on the phone. Google will automatically restore your contacts, calendar, and other data. Open the Google app related to the data you backed up, and you'll see it start to restore, or it may be already restored. Check your Google Contacts, Google Photos, Google Drive and other Google apps just to make sure. Samsung's Phone Backup Samsung isn't the only Android phone maker. According to AppBrain.com though, Samsung has around 45% market share in smartphones. So, there's almost a 50/50 chance your phone is a Samsung. Again, make sure you're doing this over WiFi to avoid cellular data charges, and you will need to have an account with Samsung. Find and tap the Settings icon. Once in the Settings screen, find and tap Cloud and Accounts. In the Cloud and Accounts screen, tap Samsung Cloud. Now, scroll down to the Backup and Restore area of this screen. Tap Backup this phone. You're on the Back Up Data screen now. Here you can select what you want to back up. Phone, Messages, Contacts, Calendar, Clock, Settings, Home Screen, Apps, Documents, Voice Recorder, and Music are your options. NOTE: It will only backup what is in the Samsung versions of these apps. For example, backing up Music means it will only backup what is in the Samsung Music app. It will not backup anything in your Spotify. Once you've made your selections, tap the BACK UP button at the bottom of the screen. It will turn into a STOP button. You'll start to see the back up progress of the different selections you made, as well as an overall percentage of back up completed at the top of the screen. This will show until it is completed. It could take several minutes. Once your phone is backed up, you can restore it from your Samsung account by doing the following Go to the Backup and Restore screen. Tap Restore data, and it will ask you which device to restore. Select the device you want to restore. Select the data you would like restored. Tap the Restore button to finish the process. All Backed Up That's all there is to making sure your Android phone is backed up to either Google or to Samsung's cloud services. If you have a different make of Android phone, like an LG, Huawei, or something else, they may also have a cloud service and a backup process. Look around in the settings on your phone to see, or check the support pages for your phone's maker. Sometimes, you and your Android phone just don't get along: You want to watch a video and it won't stop ping you with notifications. You have hundreds of apps installed on your phone and trying to figure out which one is incessantly bothering you would take too much time. In these situations, the scorched-Earth method works best—provided you don't mind losing all your personal data. To reset your Android phone back to its pristine, fresh-from-the-factory state, simply head on over to your phone's Settings app and look for the Backup and Restore menu. Tap on it, and you should see an option labeled Factory data reset. Selecting this option will pop up a window asking you to confirm your selection. At this point, note that if you choose to proceed, you'll lose all data on your phone, including your apps, photos, music, and any contacts that aren't backed up to Gmail's servers. If you're okay with starting over, hit the reset phone button and your phone will begin the process of resetting itself. Resetting your phone can take anywhere between 5 and 10 minutes, depending on how much stuff you had on it. Some phones won't let you reset them unless you have over a certain percentage of battery, so it's best to perform this operation while the phone is plugged in and charging. Once the phone is done purging itself of all your data and apps, your phone will be just like new—software-wise, anyway—and you'll be prompted to go through the setup process once more. Android phones are some of the most customizable and versatile devices on the market. Whether you're a photographer, a power user, or just looking for a phone to get the job done, there's an Android device out there for you. With this wide range of options, it can be quite overwhelming to pick one Android phone for yourself. To help, here are the best Android phones available today. Google Pixel 4a Price: \$349 (non-5G); \$499 (5G) 5G: Only in the 5G version This mid-range phone by Google boasts a decent camera, sophisticated design, and solid software. It's an excellent option for gamers and photographers alike who aren't looking to spend extra on a flagship phone but still want respectable performance. One of the Pixel 4a's biggest advantages over its competitors is its three-year software update guarantee. Unlike many other low-priced Android phones, Google offers OS and security updates that extend the life of the phone. The Pixel 4a comes with features like a native Recorder app, an updated messaging app with an iMessage feel, and an 18W fast-charging adapter in the box. From playing music to pulling up Twitter profiles, Google Assistant provides a quick-and-easy way to get many things done without even unlocking your device. Specs CPU: Qualcomm Snapdragon 730G (non-5G); Qualcomm Snapdragon 765G (5G) Screen Size: 5.8 inches (non-5G); 6.2 inches (5G) Screen Resolution: 1080 x 2340 Front Camera Resolution: 8MP Rear Camera Resolution: 12MP dual-pixel (non-5G); 12MP dual-pixel and 16MP ultrawide Memory: 6GB Storage Capacity: 128GB Battery Life: 9 Hours Motorola Moto G Power Price: \$249 5G: No With some of the best battery life available anywhere and decent performance, the Motorola Moto G Power is one of the best budget phones you can buy. Its \$249 price tag makes it among the least expensive smartphones from the major manufacturers. Better yet, its upgraded design and solid 6.6-inch display mean you get more for your money. The Moto G Power has 4GB of RAM and is powered by a Qualcomm Snapdragon 665 octa-core processor. Although it's not as powerful as more expensive phones, the phone still performs well when playing games or watching videos. Specs CPU: Qualcomm Snapdragon 662 Screen Size: 6.6 inches Screen Resolution: 1600 x 720 Front Camera Resolution: 8MP Rear Camera Resolution: 48MP Memory: 3GB Storage Capacity: 32GB, expandable up to 512GB Battery Life: Up to 3 Days OnePlus 8 Pro Price: \$799 5G: Yes, with T-Mobile What really makes the OnePlus 8 Pro stand out is its incredible display quality. Even at the battery-saving 60Hz, this phone's screen has incredible color-accuracy and brightness. Kick it up a notch to 120Hz, and the 2K AMOLED screen really shines. Especially considering its powerful screen, the 8 Pro has good battery life. If you do run out, the Warp Charge 30T comes in the box and can fill the battery in less than an hour. Unlike most other phones at the same price range, the OnePlus 8 Pro does not offer universal 5G compatibility. You can access top 5G speeds if you use T-Mobile, but Verizon and AT&T users are stuck with 4G speeds. Specs CPU: Qualcomm Snapdragon 865 Screen Size: 6.78 inches Screen Resolution: 3168 x 1440 Front Camera Resolution: 16MP Rear Camera Resolution: 48MP Memory: 8 or 12GB Storage Capacity: 128 or 256GB Battery Life: 10 hours Samsung Galaxy Note20 Price: \$999.99 5G: Yes The Samsung Galaxy Note20 was released as a cheaper alternative to the Ultra version, coming in at just under \$1,000. As a result, it doesn't come with many of the features that the Ultra boasts. Despite that, it retains enough of these features to remain a solid option for those looking to spend a grand on an Android phone. The Note20 does support the Samsung S Pen. So, if that's what you're most invested in, this phone is a cheaper way to get one than the Ultra. Compared to its more expensive sibling, the phone has slightly worse performance, with 8GB of RAM and a Qualcomm Snapdragon 865+ chipset. It features a respectable camera with two 12MP lenses and a 120-degree ultra-wide lens, making it suitable for most every-day users. Like the Ultra, it can also record video in optically stabilized 8K. Specs CPU: Qualcomm Snapdragon 865+ Screen Size: 6.7 inches Screen Resolution: 2400 x 1080 Front Camera Resolution: 10MP Rear Camera Resolution: 12MP ultrawide, 12MP wide-angle, 64MP telephoto Memory: 8GB Storage Capacity: 128GB Battery Life: 12 Hours Samsung Galaxy Note20 Ultra Price: \$1,299 5G: Yes The Samsung Galaxy Note20 Ultra was widely crowned as the best Android phone in 2020 and for good reason. With a bright, beautiful display, lightning-fast performance, and the excellent S Pen, the Note20 Ultra is both a phone and an all-in-one productivity tool. The phone comes with 12GB of RAM, expandable storage, and a Snapdragon 865+ processor. As a result, it's snappy and easy to use for everything from streaming movies to playing games. Where the Ultra really shines is in its beautiful display and S Pen compatibility. One of the first phones to adopt a 120Hz screen, it displays detail and color at an incredible level. Specs CPU: Qualcomm Snapdragon 865+ Screen Size: 6.9 inches Screen Resolution: 3088 x 1440 Front Camera Resolution: 10MP Rear Camera Resolution: 12MP ultrawide, 108MP wide-angle, 12MP telephoto Memory: 12GB Storage Capacity: 128 or 512GB, expandable up to 1TB Battery Life: 12 Hours Samsung Galaxy S21 Ultra Price: \$1,199.99 5G: Yes The Samsung Galaxy S21 Ultra justifies its high price tag with a truly impressive array of features. This includes five cameras, universal 5G compatibility, and S Pen support. Redesigned with a new contour-cut body and five cameras, the S21 Ultra is built to impress. It's the first Galaxy S phone to offer compatibility with the excellent S Pen, making it an excellent option for artists and notetakers alike. With a 120Hz 2K AMOLED display, images are bright and color accurate. This feature is especially appreciated when viewing photos taken with the phone's impressive camera, which offers a zoom of up to 10 times and beautiful contrast, autofocus, and stabilization. The Galaxy S21 Ultra is compatible with a huge range of 5G frequencies, including all current networks and even some that haven't come into use yet. In that respect, it's an excellent investment for those who are highly interested in testing out new 5G technology as soon as possible. Specs CPU: Qualcomm Snapdragon 888 Screen Size: 6.8 inches Screen Resolution: 3200 x 1400 Front Camera Resolution: 40MP Rear Camera Resolution: 108MP wide, 12MP ultrawide, 12MP wide-angle, two 10MP telephoto Memory: 12 or 16GB Storage Capacity: 128, 256, or 512GB Battery Life: 11.5 Hours
